The TierPoint Cloud Difference

Your Cloud, Your Way
Our experienced team of industry professionals will meet with you to identify your business challenges and then design the right cloud solution to help ensure optimum performance, reliability and security.

Industry Leading Partners and Infrastructure
To be the best, you've got to work with the best. TierPoint partners with VMware, Cisco, Dell, Fortinet, HPE, Akamai, Imperva, Mimecast, Intermedia, Apparatus and NetApp to provide enterprise-grade cloud services for any size business or organization.

Your Data, Our Centers
Your data will be safe and secure in a TierPoint owned and operated top tier data center facility. All TierPoint data centers are audited annually by a third party to ensure SSAE 16, HIPAA, PCI DSS, SOC 1 Type II and SOC 2 Type II standards annually.

High Performance Firewalls
We provision each client with dedicated high performance firewalls capable of passing from 1 Gbps up to 36Gbps of traffic for some private cloud deployments. In the event of equipment failure, redundancy is built-in to help keep your data running and protected.

Advanced Network Protection
TierPoint's physical firewall architecture provides the option to add advanced features to more fully protect your cloud environment while maintaining performance with such options as intrusion detection/prevention, anti-virus protection, data leak prevention, application control and web content filtering.

Built for Reliability
Most cloud providers provide single firewalls, leaving clients vulnerable to outages. Not TierPoint. Multi-layered redundancies are standard. From redundant network cards in their hosts for both network and storage, to switches, core routers, storage controllers, firewalls, generators, cooling systems and more, we've got you covered… and covered again.

More Flexibility
You have unique needs, we realize that, which is why our cloud architecture provides ultimate flexibility to accomplish your objectives and requirements. Need to implement private fiber, MPLS or Ethernet connectivity using your existing carrier? You can do that. Want to connect your colo rack to your cloud environment? You can do that too with TierPoint.

Network/Systems Isolation
With TierPoint, you can have confidence that your infrastructure in the cloud is protected in an isolated environment, no one else can impact your data or servers.

True End-to-End Solutions
From data center to infrastructure, TierPoint designs and deploys true end-to-end solutions with unrivaled support from a local team who will work closely with you, each step of the way.

Continuous Innovation
Your TierPoint cloud solution will be designed to continually improve as new innovations become available.
